**Lumache** (/lu'make/) is a Python library for cooks and food lovers that creates recipes mixing random ingredients. It pulls data from the [Open Food Facts database](#) and offers a *simple* and *intuitive* API. Lumache has its documentation hosted on Read the Docs.

Check out the [\*Usage\*](#) section for further information, including how to [\*Installation\*](#) the project.

---

**Note:** This project is under active development.

---

## CONTENTS

## 1.1 Usage

### 1.1.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

### 1.1.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

`lumache.get_random_ingredients(kind=None)`

Return a list of random ingredients as strings.

**Parameters**

`kind (list[str] or None)` – Optional “kind” of ingredients.

**Raises**

`lumache.InvalidKindError` – If the kind is invalid.

**Returns**

The ingredients list.

**Return type**

`list[str]`

The `kind` parameter should be either “meat”, “fish”, or “veggies”. Otherwise, `lumache.get_random_ingredients()` will raise an exception.

`exception lumache.InvalidKindError`

Raised if the kind is invalid.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```

## 1.2 API

---

<i>lumache</i>	Lumache - Python library for cooks and food lovers.
----------------	---

---

### 1.2.1 lumache

Lumache - Python library for cooks and food lovers.

#### Functions

---

<i>get_random_ingredients([kind])</i>	Return a list of random ingredients as strings.
---------------------------------------	---

---

#### Exceptions

---

<i>InvalidKindError</i>	Raised if the kind is invalid.
-------------------------	--------------------------------

---
